Table 1: **Baseline Characteristics by Treatment Group**

Characteristic	**Overall** N = 111,452	**Control** N = 58,781	**Vaccine** N = 52,671	**p-value**
Time (months)				<0.001

Characteristic	Overall N = 111,452	Control N = 58,781	Vaccine N = 52,671	p-value
1	38,588 (35%)	20,014 (34%)	18,574 (35%)	
2	37,212 (33%)	19,608 (33%)	17,604 (33%)	
3	35,652 (32%)	19,159 (33%)	16,493 (31%)	
Severe Adverse Events (Yes)	175 (0.2%)	80 (0.1%)	95 (0.2%)	0.062
Number of Sites	50 (29)	50 (29)	50 (29)	0.7
Sex				0.015
Male	56,076 (50%)	29,373 (50%)	26,703 (51%)	
Female	55,376 (50%)	29,408 (50%)	25,968 (49%)	
Age (years)	45 (11)	45 (10)	45 (12)	0.060

Checking for missing data pattern (if any)

```
fig2a <- vis_miss(combined_dataset_wide) +
  theme(axis.text.x = element_text(vjust = 0))
ggsave("figures_tables/missingdata_info.png", fig2a, height = 5, width =8)
```

Missingness only seen in outcome data (SAE) and more so for 2nd and third timepoints

Missingness by gender

```
tx_gender_missing <- combined_dataset |>
  group_by(sex, time) |>
  mutate(total = length(unique(id))) |>
  ungroup() |>
  drop_na() |>
  group_by(sex, time) |>
  summarize (missing_pct = (total[1] - length(unique(id)))*100/total[1])
```

```
## `summarise()` has regrouped the output.
## i Summaries were computed grouped by sex and time.
## i Output is grouped by sex.
## i Use `summarise(.groups = "drop_last")` to silence this message.
## i Use `summarise(.by = c(sex, time))` for per-operation grouping
##   (`?dplyr::dplyr_by`) instead.
```

```
missing_by_gender <- ggplot(aes(x = time, y = missing_pct, group = sex, color = sex),
       data = tx_gender_missing) +
  geom_point() +
  scale_x_continuous(limits = c(1, 3))+
  geom_line() +
  labs(x = "Time after Vaccine (in months)", y = "Missing Data %", color = "Sex") +
  theme_classic()

ggsave("figures_tables/missingness_by_gender.pdf", missing_by_gender, height = 3, width =5)
#system("pdfcrop figures_tables/missingness_by_gender.pdf figures_tables/missingness_by_gender.pdf")
missing_by_gender
```

Characterise missingness pattern

Number of drop outs

```
missingpattern <- combined_dataset_wide|>
  mutate(pattern = case_when(is.na(month_3) == FALSE ~ "Complete",
